在“Our Business”部分，我们可以找到 NVDA 公司的主要业务。

Our Businesses

We report our business results in two segments.

The Compute & Networking segment is comprised of our Data Center accelerated computing platforms and end-to-end networking platforms including Quantum for InfiniBand and Spectrum for Ethernet; our NVIDIA DRIVE automated-driving platform and automotive development agreements; Jetson robotics and other embedded platforms; NVIDIA AI Enterprise and other software; and DGX Cloud software and services.

The Graphics segment includes GeForce GPUs for gaming and PCs, the GeForce NOW game streaming service and related infrastructure; Quadro/NVIDIA RTX GPUs for enterprise workstation graphics; virtual GPU, or vGPU, software for cloud-based visual and virtual computing; automotive platforms for infotainment systems; and Omniverse Enterprise software for building and operating metaverse and 3D internet applications.

ITEM 1. BUSINESS

Overview

We are a global technology leader that designs, develops and supplies a broad range of semiconductor and infrastructure software solutions. Our over 50-year history of innovation dates back to our diverse origins from Hewlett-Packard Company, AT&T, LSI Corporation, Broadcom Corporation, Brocade Communications Systems LLC, CA, Inc., Symantec Enterprise Security, and VMware, Inc. ("VMware"). Over the years, we have assembled a large team of semiconductor and software design engineers around the world. We maintain design, product and software development engineering resources at locations in the U.S., Asia, Europe and Israel, providing us with engineering expertise worldwide. We strategically focus our research and development resources to address niche opportunities in our target markets and leverage our extensive portfolio of U.S. and other patents, and other intellectual property ("IP") to integrate multiple technologies and create system-on-chip ("SoC") component and software solutions that target growth opportunities. We design products and software that deliver high-performance and provide mission critical functionality.

We develop semiconductor devices with a focus on complex digital and mixed signal complementary metal oxide semiconductor ("CMOS") based devices and analog III-V based products. We have a history of innovation in the semiconductor industry and offer thousands of products that are used in end products such as enterprise and data center networking, home connectivity, set-top boxes ("STB"), broadband access, telecommunication equipment, smartphones and base stations, data center servers and storage systems, factory automation, power generation and alternative energy systems, and electronic displays. We differentiate ourselves through our high performance design and integration capabilities and focus on developing products for target markets where we believe we can earn attractive margins.

Our infrastructure software solutions enable customers to plan, develop, automate, manage, and secure applications across mainframe, distributed, mobile, and cloud platforms. Many of the largest companies in the world, including most of the Fortune 500, and many government agencies rely on our software solutions to help manage and secure their on-premise and hybrid cloud environments. Our portfolio of industry-leading infrastructure and security software is designed to modernize, optimize, and secure the most complex hybrid environments, enabling scalability, agility, automation, insights, resiliency and security. We also offer mission critical fibre channel storage area networking ("FC SAN") products and related software in the form of modules, switches and subsystems incorporating multiple semiconductor products.

In addition, the hybrid-cloud portfolio we acquired with VMware helps enterprises simplify their information technology ("IT") environments so they can increase business velocity and flexibility. The VMware portfolio spans hybrid cloud, app-delivery acceleration, zero-trust security, and software-defined edge, making it easy for customers to run their mission-critical workloads across private, public and edge environments with security and resiliency.

我们可以通过以下表格更加详细地了解 AVGO 公司半导体器件开发业务。

Major End Markets	Major Applications	Material Product Families
Broadband	STB and Broadband Access	- STB SoCs - DSL/PON gateways - DOCSIS cable modem and networking infrastructure - DSLAM/PON optical line termination - Wi-Fi access point SoCs
Networking	Data Center, Service Provider, and Enterprise Networking	- Ethernet switching and routing silicon - Custom silicon solutions - Optical and copper PHYs - Fiber optic transmitter and receiver components
Wireless	Mobile Device Connectivity	- RF front end modules and filters - Wi-Fi, Bluetooth, GPS/GNSS SoCs - Custom touch controllers - Inductive charging ASICs
Storage	- Servers and Storage Systems - HDD and SSD	- SAS and RAID controllers and adapters - PCIe switches - Fibre channel host bus adapters - Ethernet NIC - Read channel based SoCs; Custom flash controllers - Preamplifiers
Industrial	Factory Automation, Renewable Energy and Automotive Electronics	- Optocouplers - Industrial fiber optics - Industrial and medical sensors - Motion control encoders and subsystems - Light emitting diode - Ethernet PHYs, switch ICs and camera microcontrollers

机顶盒及宽带接入解决方案 —— （通信系统设备制造）

因特网交换机及路由器芯片、定制芯片、物理层设备、光纤发射器和接收器组件 —— （集成电路制造、光电子器件制造）

射频前端模块和滤波器、Wi-Fi、蓝牙、GPS/GNSS SoC、自定义触摸控制器、感应式充电 ASIC —— （通信系统设备制造、集成电路制造）

服务器和存储系统、HDD 和 SSD —— （通信系统设备制造、集成电路制造、电子电路制造）

工业光纤、工业和医疗传感器、发光二极管、以太网 IC 等 —— （光纤制造、敏感元件及传感器制造、显示器件制造、集成电路制造）

对于基础部分软件，我们可以通过以下表格详细了解。

Software Portfolio	Portfolio Description	Major Portfolio Offerings
Mainframe Software	- DevOps, AIOps, Security, Workload Automation, Data Management, and Foundational Software Solutions - Beyond Code programs	- Operational Analytics & Management - Workload Automation - Database & Data Management - Application Development & Testing - Identity & Access Management - Compliance & Data Protection - Security Insights - Skills Development and Staffing - Software Rationalization and Migration - Software Efficiency and Cost Optimization Tools - Change Management Support - Technology Proof of Concepts
Distributed Software	Solutions that optimize the planning, development and delivery of business critical services	- ValueOps - DevOps - AIOps
Symantec Cyber Security	Comprehensive threat protection and compliance solutions that secure against threats and compliance risks by protecting users and data on any app, device, or network	- Endpoint Security - Network Security - Information Security - Identity Security
FC SAN Management	Solutions that transforms current storage networks with autonomous SAN capabilities	Fibre Channel Switch
Payment Security	Arcot payment authentication network powered by 3-D Secure	Payment Security Suite

Product information

Semiconductors are electronic components that serve as the building blocks inside modern electronic systems and equipment. Semiconductors, generally known as “chips,” combine multiple transistors to form a complete electronic circuit. We have a diverse product portfolio that is used to accomplish many different things, such as converting and amplifying signals, interfacing with other devices, managing and distributing power, processing data, canceling noise and improving signal resolution. This broad portfolio includes approximately 80,000 products that are integral to almost every type of electronic equipment.

Our segments represent groups of similar products that are combined on the basis of similar design and development requirements, product characteristics, manufacturing processes and distribution channels. Our segments also reflect how management allocates resources and measures results.

Analog

Our Analog segment generated \$13.04 billion of revenue in 2023. Analog semiconductors change real-world signals, such as sound, temperature, pressure or images, by conditioning them, amplifying them and often converting them to a stream of digital data that can be processed by other semiconductors, such as embedded processors. Analog semiconductors are also used to manage power in all electronic equipment by converting, distributing, storing, discharging, isolating and measuring electrical energy, whether the equipment is plugged into a wall or using a battery. As the digitization of electronics continues, there is a growing need and opportunity for analog chips to provide the power to run devices and the critical interfaces with human beings, the real world and other electronic devices. Our Analog products are used in many markets, particularly industrial, automotive and personal electronics.

Sales of our Analog products generated about 74% of our revenue in 2023.

Our Analog segment includes the following major product lines: Power and Signal Chain.

Power

Power includes products that help customers manage power in electronic systems. Our broad portfolio is designed to manage power requirements across different voltage levels, including battery-management solutions, DC/DC switching regulators, AC/DC and isolated DC/DC switching regulators, power switches, linear and low-dropout regulators, voltage references and lighting products.

Signal Chain

Signal Chain includes products that sense, condition and measure real-world signals to allow information to be transferred or converted for further processing and control. Our Signal Chain products include amplifiers, data converters, interface products, motor drives, clocks, logic and sensing products.

Embedded Processing

Our Embedded Processing segment generated \$3.37 billion of revenue in 2023. Embedded Processing products are the digital “brains” of many types of electronic equipment. They are designed to handle specific tasks and can be optimized for various combinations of performance, power and cost, depending on the application. Our devices vary from simple, low-cost microcontrollers used in applications such as electric toothbrushes to highly specialized, complex devices such as motor control. Our Embedded Processing products are used in many markets, particularly industrial and automotive.

An important characteristic of our Embedded Processing products is that our customers often invest their own R&D to write software that operates on our products. This investment tends to increase the length of our customer relationships because many customers prefer to reuse software from one product generation to the next.

Sales of Embedded Processing products generated about 19% of our revenue in 2023.

Our Embedded Processing segment includes microcontrollers, digital signal processors (DSPs) and applications processors. Microcontrollers are self-contained systems with a processor core, memory and peripherals that are designed to control a set of specific tasks for electronic equipment. DSPs perform mathematical computations almost instantaneously to process or improve digital data. Applications processors are designed for specific computing activity.

Other

We report the results of our remaining business activities in Other, which includes operating segments that do not meet the quantitative thresholds for individually reportable segments and cannot be aggregated with other operating segments. Other generated \$1.11 billion of revenue in 2023 and includes revenue from DLP® products (primarily used to project high-definition images), calculators and certain custom semiconductors known as application-specific integrated circuits (ASICs).

In Other, we also include items that are not used in evaluating the results of or in allocating resources to our segments. Examples of these items include acquisition, integration and restructuring charges, as well as certain corporate-level items, such as litigation expenses, environmental costs and gains and losses from other activities, including asset dispositions.
