

The legalization of recreational use cannabis is beneficial

Hook
legalization
of
Cannabis

(Colorado and Washington State were the first US states to legalize adult cannabis use in 2014.30 24. US states have since legalized adult cannabis use; about half of the US population now live in states where it is legal for adults to use cannabis for non-medical purposes. (Yimer,2025) It is commonly known that the word "cannabis" is

Background
Cannabis is
gradually
legalize

connected to things like violence, economic depression and drug addicts in most situation. But with the development of economy, the recreational cannabis consumption has been legalized in many countries, such as America and Luxembourg.]

This part
wants to show the
disadvantages of cannabis
However, it needs
data to prove

However, some recent researches have showed different ideas. The legalization of recreational use cannabis is beneficial and it can (cause economic growth) relatively

(low crime rates) and (improved public health outcomes.)

Three arguments from the body
paragraphs are mentioned here.
It's a good structure. Some words
need to revise
"low" outcome
low $\Rightarrow$ lower

Firstly, there is no denying that legalization of recreational use cannabis can boost the economy and the two main reasons are increased tax revenue and decreased enforcement costs. The main income of the government is the tax revenue and

legalizing cannabis allow the government to collect taxes from the legalized drug.

Based on the results of a new report by the Canadian Imperial Bank of Commerce

World Markets, the legalization of marijuana could create a \$10 billion a year industry

and the Canadian government can collect 50% or more of the potential \$10 billion if

there is a high "sin tax" set on marijuana products (Hajizadeh, 2016) Therefore,

cannabis legalization shows significant potential in terms of tax revenue and can

increase the government income to boost the economy. Meanwhile, legalization of

recreational use cannabis can reduce the enforcement costs. Also according to

for "sin tax"
maybe need
more explanation

Hajizadeh, there were 73 000 marijuana related criminal offences (67% of all police-reported drug offences) in 2013. If cannabis is legalized, a significant portion of these

Good idea!
to use it

cases would no longer be seemed as criminal offenses. This would reduce many

human and material resources, thereby lowering government costs associated with

drug-related incarceration and law enforcement. (In a nutshell, legalized cannabis for

recreational use can lead to economic growth by increasing tax revenue and

decreasing enforcement costs.

It is very great that using

so many strong data to prove

(Additionally, the legalization of recreational use cannabis can also increase public

health outcome. The last paragraph mentioned that legalization of recreational use

cannabis can increase tax revenue and it can be used into public expenditures,

especially public health, Drug treatment and state alcohol funds benefit largely from

marijuana taxes. (For instance, Oregon distributes 20% to the treatment of drug and

alcohol, while Washington allocates 25% to the treatment of substance use disorders,

prevention, and education (Zvonarev, 2019). These investments have led to significant

improvements in public health outcome. Meanwhile, deaths from opioid overdoses has

been a serious problem in countries like America. The legalization of recreational use

cannabis can reduce the use of opioid drugs. Also cited from the article written by

Zvonarev, "After 1999, states such as Colorado, Maine, Alaska, Nevada, and

Massachusetts among others, enacted cannabis use laws. These states recorded a

24.8% decrease in opioid overdose mortality, and these states got stronger after every

year of legalization". Decreased use of opioids and addictive substances has resulted

in lower mortality and finally leads to improved public health outcome. (All in all, the

logical

legalization of recreational use cannabis can also increase public health outcome by increasing investments in public health industry and reducing the use of opioid drugs.

Furthermore, the legalization of recreational use cannabis can low crime rates.

Cannabis legalization, especially for recreational use, has continued to generate controversies and the core public debate is its implications for public safety. The

legalization can reduce crime rate and protect public safety because it can diminish

underground cannabis market and improve police effectiveness in solving violent

crime. There is no denying that there will be a greater availability of more affordable

cannabis with stable quality after the legalization of recreational use cannabis, which

will lead to reduced underground drug market and can reduce crime to a certain extent

so as to protect public safety. Meanwhile, the legalization would improve police

effectiveness in addressing serious crimes, and as a result would increase clearance

rates and generate a crime deterrence effect (GZ Wu, 2022). It is because cannabis

legalization reduced a significant source of arrests for officers and the number of

arrests was an important measure of officer performance which means the police

officers may have to make more arrests for other offenses to have a better

performance, leading to the improvement in solving violent crime. In a nutshell, the

legalization of recreational use cannabis can reduce underground drug market and

lead to improvement in solving violent crime to reduce crime rate.

Although the legalization of recreational use cannabis ha benefits, some people

may argue that the cannabis remains the most commonly used federally illicit

psychoactive drug by U.S. adolescents. Converging evidence demonstrated that
